## G101 Stick Grip

The G101B Stick Grip features a single 50 mA, Push To Talk (PTT) switch. The switch comes pre-wired with two, 24" long, 24 gage wires. These wires should be long enough to exit your control stick.

The G101B foam grip will fit onto 1" stick diameter. We also include spacers for 7/8" and 3/4" diameter control sticks.

### Installation Instructions

Slide the foam grip and any spacers needed onto your control stick. If the foam grip fits tight, try blowing compressed air along the stick tube to expand the foam as you slide the foam grip down.

Connect one white wire to ground. Connect the other white wire to the appropriate connection on your COM radio. It does not matter which white wire connects to the ground or radio. Use caution where the wires exit the control stick tube to avoid wire chafing.

Secure the G101B switch module with set screws or pop rivets (not included). Be careful to avoid the two wires inside.
